

# Archiver

Migrate. Integrate. Manage. **Optimize.** Protect. Report.

**Optimize.** Archive Microsoft® SharePoint® 2010 content to tiered storage. Reduce cost. Increase compliance. Boost performance.

## Key Benefits

- Reduce storage costs by archiving data to cost-effective on-premise or cloud storage tiers
- Ensure compliance with policies or retention and remediation
- Improve SharePoint performance and end-user experience by optimizing SQL server resources and utilization
- Support highly-customized business rules for content lifecycle management
- Reduce SharePoint site proliferation and database bloat by moving stale, end-of-life content to archive tiers
- Integrate SharePoint with storage hardware for encryption, de-duplication, snapshots, and advanced storage and content lifecycle management
- Maintain discoverability with search, view, and restore of offline, archived content

**Archive content from SharePoint content databases to storage tiers based on highly customizable business rules.**

## Enabling Content Lifecycle Management

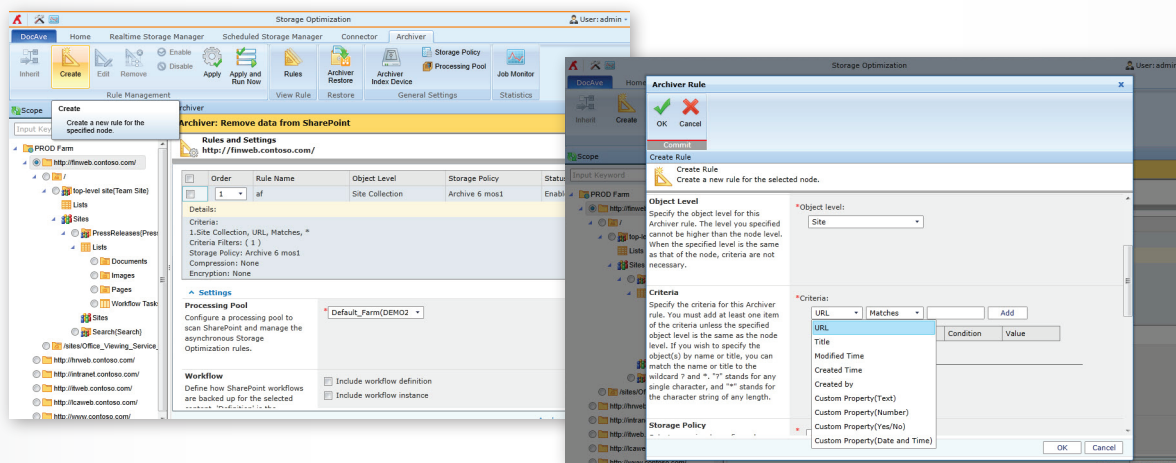

DocAve Archiver for SharePoint 2010 moves content from SQL Server to other storage tiers based on fully customizable business rules, thereby enabling hierarchical storage of SharePoint content over the content lifecycle. By offloading content that would ordinarily reside in expensive SQL Server storage to less expensive platforms, DocAve Archiver dramatically reduces SharePoint database bloat and storage cost. It also reduces compliance risk by enabling consistent and automatic disposition of content in accordance with records management policies for content preservation, remediation, and retention.

## Technical Overview

- Define content archiving policies with rich business rules based on built-in or customizable properties including content type, owner, last modified date and time, workflow state, and custom metadata
- Centrally manage storage and retention policies across multiple farms
- Understand the effect of policies by reporting SharePoint objects subject to archiving rules, and by performing test runs
- Archive entire site collections, sites, lists, or libraries
- Archive document and item content, metadata, versions, workflow state, and permissions
- Apply retention policies to move content through multiple storage tiers to minimize storage cost
- Remediate content upon expiration in compliance information governance
- Enable security and compliance with robust data encryption for archived content
- Archive content to advanced storage systems for data compression, de-duplication and self-healing functionality
- Manage global SharePoint 2010 deployments with multi-language support
- Use DocAve to search and restore archived content at any time

**The highly intuitive DocAve 6 console defines fully customizable business rules to archive or remediate dormant or expired content.**

To further optimize SharePoint storage resources and costs, consider leveraging all of DocAve's storage optimization solutions, including DocAve Connector, Report Center, and Storage Manager. As with all DocAve products, DocAve Archiver leverages only fully supported Microsoft methodologies and APIs.
